Introduction

All the features and specifications which I included in this project are mentioned and it includes requirements, scope and flow of application.

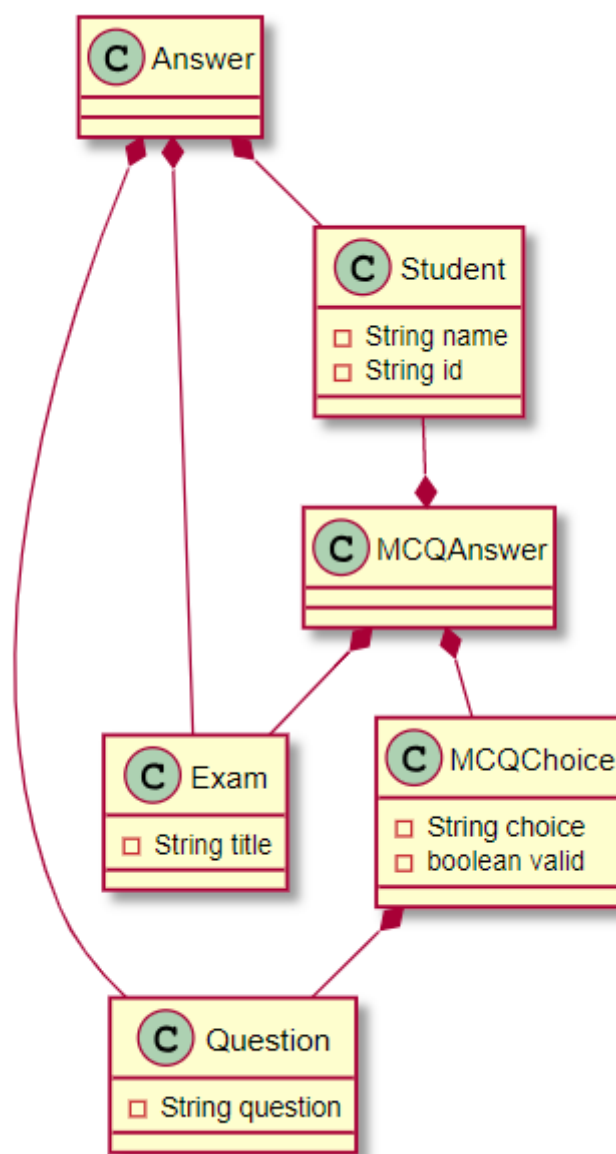

This project flow is very simple evaluation and the main specification is, I used **spring boot** as a backend to this project.

HTML is used as a frontend for the application.

Objective

Student will be able to attend the quiz and view the result at the same time.

The basic flow of code

Technologies

Front end:	HTML
Backend:	JAVA, Spring MVC, JSP
Database:	MySQL
Server:	Tomcat version 7.0
Framework:	Sprint boot 2.0.5
Platform:	Windows 10 and Eclipse IDE

Declaration

I sincerely admitting that as minimum knowledge on the java code, I have worked hard to build this program.

I also admitting that I have not reached as the professor requirements. But I sincerely thanking to the professors who explained the way of learning the programming language.

I would like to submit the code which I have learned and which I have written with my knowledge.
